

SMOOTH-FLYING
SCALE RC MODEL OF
A MILITARY RC PLANE

NITROMODELS

PREDATOR

What could be cooler than an RC scale model of an unmanned aerial vehicle? The new, easy-to-build Electric Predator B UAV from Nitro Models flies and looks great. It's really an electric thermal glider disguised as a spy plane. It's constructed of built-up balsa and has military camouflage covering. Any intermediate or advanced pilot will be completely delighted with it.
